SUMMARY

Results-driven Java Backend Developer with professional experience at FortyTwo Labs, specializing in **cryptographic algorithm implementation**, **CryptoServer integration**, and **JNI (Java Native Interface)** bindings. Proficient in Spring Boot and Netty for building high-performance, security-critical systems. Skilled in RESTful API development, self-signed certificate (INIT) generation, and cryptographic verification workflows. Passionate about clean backend architecture, secure system design, and enterprise-grade Java development.

EXPERIENCE

FortyTwo Labs

2025 – Present

Software Engineer

Pune, India

- Implement **cryptographic algorithms** for a CryptoServer platform, handling secure key management, encryption/decryption operations, and algorithm lifecycle within a Java backend.
- Develop and maintain **INIT self-signed** and cryptographic signature verification workflows, ensuring protocol-level security compliance.
- Build and expose **RESTful APIs** using Spring Boot to integrate cryptographic services with client applications, enabling standardized and secure communication.
- Leverage **Netty** for high-performance, asynchronous network communication, optimizing low-latency data transfer between system components.
- Write **JNI (Java Native Interface)** bindings to bridge Java application logic with native cryptographic libraries, enabling seamless platform-level security integration.
- Collaborate with cross-functional teams in an Agile environment; conduct code reviews and uphold engineering best practices for security-critical software.

PROJECTS

JobVista Portal | Java, Spring Boot, React.js, MySQL, REST API

- Engineered a full-stack job portal with **secure user authentication** and role-based access control (job seeker and employer roles), and dynamic job listing management.
- Developed **RESTful APIs** with Spring Boot powering job posting, application tracking, candidate search, and employer dashboards.
- Built a responsive **React.js frontend** consuming backend APIs, delivering a seamless user experience across devices.
- Designed a **normalized MySQL schema** for efficient querying of jobs, applications, and user profiles at scale.

Sorting Visualization Application | Java, JavaFX, Multithreading

- Architected a Java desktop application using **JavaFX** to visualize classic sorting algorithms (Bubble Sort, Merge Sort, Quick Sort) with real-time graphical feedback.
- Applied **multithreading and event-driven programming** to ensure smooth, non-blocking UI updates during algorithm execution.
- Implemented comparative performance metrics enabling users to observe **time-complexity differences** between algorithms in a hands-on, visual format.

EDUCATION

IACSD – Institute of Advanced Computing & Software Development

2024 – 2025

Post Graduate Diploma in Advanced Computing (PG-DAC)

Pune, India

Savitribai Phule Pune University

2021 – 2024

Bachelor of Engineering, Computer Engineering | CGPA: 7.62/10

Pune, India

SKILLS

Core Language : Java

Backend Frameworks : Spring Boot, Spring MVC, Hibernate (JPA), Netty

Security & Cryptography : Cryptographic Algorithms, CryptoServer Integration, JNI (Java Native Interface), Self-Signed Certificate (INIT), Digital Signature & Verification

API & Integration : RESTful APIs, System Integrations, Microservices Concepts

Frontend : React.js, HTML, CSS, Bootstrap

Databases : MySQL, MongoDB

Testing : JUnit, Integration Testing, Functional Testing

Tools & Platforms : Git, GitHub, Linux, Microsoft Azure, Maven

Practices : Agile / Scrum, SDLC, Software Engineering Principles, MVC Architecture

CERTIFICATIONS

C, C++ & DSA Bootcamp – Core2web Technologies

Java Programming & Operating Systems – Core2web Technologies
